

If the atmosphere surrounding the sampler is considered a hazardous location, the TC-3 Triple Explosion Proof is the right choice. There are only three possible means for ignition with a Sonford Sampler; the refrigerator, solenoid valve and control panel. The TC-3 Triple Explosion Proof addresses all three areas. This does not, however, change the performance of the sampler. Other than the refrigerator, solenoid valve and control panel, the Explosion Proof sampler is the same composite sampler as the TC-3 and TC-4.

Key Features

- Explosion proof refrigerator approved for Class I Div I Group C & D
- Solenoid valve approved for Class I Div I Group C & D and Class II Div I Group E, F & G
- Explosion proof control panel approved for Class I Div I Groups B, C & D and Class II Div I Groups E, F & G.
